4 wk litter notes:

This is the litter's first assessment. The puppies are curious about their surroundings and new sounds. At this age they are very inquisitive about toys and textures. Going forward, they will be socialized with several different noises, textures and everyday situations they may encounter. The puppies tend to have low confidence and energy levels at this point due to immaturity but in the upcoming weeks this will improve.

Litter Overall:

- Pups are eager to interact.

- Pups quickly went up to the assessor.
 - Pups is eager to explore.
 - Pups are playful with one another.
 - Pups showed good confidence when meeting new people.
-

5 wk litter notes:

At five weeks, this is their first visit to the playroom. Pups are slowly exploring this new environment with mom. During this time, mom will teach pups how to be comfortable in new areas and become accustomed to the weaning process. She also helps the pups feel confidence in an otherwise stressful situation. Gradually throughout the week the pups become more comfortable and show positive confidence traits being away from mom. Energy levels have increased and pups are now playing with toys. Pups have also begun to cope with life without mom and weaning is to begin shortly after.

Litter Overall:

- Pups begin to explore their new surroundings.
- Pups consistently check for interaction to begin.
- Pups show favorable confidence in stressful situations.
- Pups have good responses to new sounds.
- Pups have good responses to new sights/objects.
- Pups do use their mouths during interaction.
- Pups do not show possessiveness.
- Litter has low to mid energy level.

White's Notes:

- White actively explores environment, staying close to the same area.
- White can play rough with siblings and mom.
- White shows no stress when in a changed environment. Such as when he went into the play area for the first time.
- White shows no stress when in a stressful situation. Such as when she started to wean away from mom.
- White was curious about the new sound. She noticed the sound and lost interest after looking around the room.
- White was curious about the new sight and took her time going up to investigate the sight.

- White can stay focused for five seconds.
- White has a minimal motivation for the toys. She will paw at and use her mouth to investigate the toys.
- White has a good motivation for the treats. She will work a short amount of time for the treats.
- White has a good motivation for tractability. She will stay and interact for a short period of time.
- White will attempt for five seconds when problem solving.
- White shows improvement with first repeat when remembering previous learning.
- White did not chase after the ball during retrieval.
- White does use her mouth to investigate more than half of the time and does not use her teeth.
- White is vocal in stressful and socially appropriate situations.
- White is gentle and calm during handling.
- White shows fearful avoidance during restraint.
- White has a low to mid level energy.
- White excites with little effort and calms easily.
- White will return after removal during interaction.
- White is more interested with trying to interact with people over playing on own.
- White is eager to interact.
- White quickly went up to the assessor when entering the play area.
- White will need more work with using the potty tray.
- White slowly started to investigate her new surroundings.
- White plays close by the assessor.
- White is eager to explore and play with siblings.
- White has a sweet and playful personality.

6 wk litter notes:

At this point, pups are weaning from mom and are becoming self sufficient. Pups are carrying around toys in their mouths and beginning to play independently. They have learned that toys are also part of human interaction. Pups have become more

sociable the more time they spend in the playroom. They have also learned that playtime is when they will use up their energy and nap time will be spent in the crate.

Litter Overall:

- Pups were quick to enter the playroom. Pups were quick to play.
- Pups consistently check for interaction to begin.
- Pups have good responses to new sounds.
- Pups have okay responses to new sights/objects.
- Pups do use their mouths during interaction.
- Pups do not show possessiveness.
- Litter has mid energy level.
- Litter is confident while playing independently.

White's Notes:

- White actively explores environment and ranges away, checking back frequently.
- White plays well with siblings.
- White shows no stress when in a changed environment.
- White shows minimal stress when in a stressful situation. Such as when she got a bath.
- White walked around the room looking for the new sound, tail up. She did not give up until after she had walked around the room.
- White was startled by the new sight and showed stress. She adjusted on own.
- White can stay focused for fifteen seconds, but can break away to something new.
- White has a minimal motivation for the toys. She will paw at and use her mouth to investigate the toys.
- White has a good to high motivation for the treats. She will work a good amount of time for the treats.
- White has a high motivation for tractability. She will stay and interact for a long period of time.
- White will attempt for fifteen seconds when problem solving.
- White shows improvement with first repeat when remembering previous learning.

- White did not chase after the ball during retrieval.
- White does use her mouth to investigate more than half of the time and uses her teeth gently.
- White is vocal in stressful and socially appropriate situations.
- White is gentle and calm during handling.
- White shows fearful avoidance during restraint.
- White has a mid level energy.
- White excites with some effort and calms easily.
- White will return after removal during interaction.
- White is more interested with trying to interact with people over playing on own.
- White is eager to interact.
- White is eager to follow the assessor around the room.
- White is constantly trying to get the assessor's attention.
- White will need more work with using the potty tray.
- White is eager to show affection.
- White can calm herself when going up to the assessor.
- White plays close by the assessor.
- White is eager to explore and play with siblings.
- White has a sweet and playful personality.

Health notes:

White is in good health.

White has base narrow.

7 wk litter notes:

This is the litter's last and final assessment. At seven weeks (49 days of age) is the most accurate age to determine long term traits and predicting the future behavior of each pup. They have already gained considerable amounts of confidence and have begun to express their personalities. Pups have been introduced to crates for small periods of time during the day. Pups have also been exposed to numerous stimuli to improve development and intelligence. In the following weeks pups will either be joining their new homes or further their socializing and training in Doodle Prep School.

Litter Overall:

- Pups were quick to enter the playroom. Pups were quick to play.
- Pups consistently check for interaction to begin.
- Pups have okay responses to new sounds.
- Pups have okay responses to new sights/objects.
- Pups do use their mouths during interaction.
- Pups are vocal only during stressful situations.
- Pups do not show possessiveness.

White's Notes:

- White actively explores environment, staying close to the same area.
- White plays well with siblings.
- White shows minimal stress when in a changed environment.
- White shows minimal stress when in a stressful situation.
- White was startled by the new sound and showed stress. She adjusted on own.
- White was curious about the new sight and took her time going to investigate the sight.
- White can stay focused for fifteen seconds and will not break away to something new.
- White has a minimal motivation for the toys. She will paw at and use her mouth to investigate the toys.
- White has a good motivation for the treats. She will work a short amount of time for the treats.
- White has a good to high motivation for tractability. She will stay and interact for a long period of time. She will get distracted away from the assessor.
- White will not stop when problem solving.
- White shows minimal improvement with first repeat when remembering previous learning.
- White did not chase after the ball during retrieval.
- White does use her mouth to investigate less than half of the time and uses her teeth gently.
- White is vocal in stressful and socially appropriate situations.
- White is excited during handling and restraint.
- White has a mid to moderate level energy.

- White excites with little effort and calms easily.
- White will return after removal during interaction.
- White is more interested with trying to interact with people over playing on own.
- White is eager to interact.
- White quickly went up to the assessor when entering the play area.
- White can calm herself when going up to the assessor.
- White whines when trying to get the assessor's attention.
- White slowly started to explore her new surroundings.
- White is constantly trying to get the assessor's attention.
- White is eager to explore and play with siblings.
- White has a sweet and playful personality.
- White will need more work with using the potty tray.
