7 Wk:

Litter Overall:

The Lilo litter overall is confident and self-assured. They are social with other dogs and a bit rough in play with one another. They showed no stress when in new situations, around new people, or in circumstances that would typically be considered stressful. They react appropriately to new sights and sounds being curious and investigative. They all have good focus memory and problem-solving abilities. They have good motivations for toys, food, and interaction. They are appropriate with interactions with people. Most of them do use their mouth to play but have a good bite inhibition and are very gentle. They are vocal only in socially appropriate situations. They are calm and tolerant of handling and restraint. They have no red flags and show no possessiveness. They have a moderate energy level. The litter overall is very consistent with no extremes of temperament.

Individual Notes:

Green is confident and self-assured. He is curious and playful. He is a bit more independent than the rest of the litter and he is happy to explore and play on his own. He is personable and comfortable with handling and interaction. He is motivated by toys and food. He has no extremes of temperament. He would do well in most any home and compared to the rest of the litter, would be a better fit for homes that need to leave their puppy a bit.

Health notes:

Green has both testicles but they have not yet descended.
